

e13 DRS and Specialized Demo 8/9

- *Please familiarize yourself with the proper set up of the e13 DRS Chain Retention System before moving on with these set up tips.*

The Demo 9 has a unique bottom bracket shell and this requires a special setup to accommodate a DRS system. The setup requires the use of the new 2006 ISCG05 DRS guide kit and ISCG05 Adapter Plate.

The ISCG Adapter plate (ISCG05 model) must be facing outboard (recessed side away from the frame) when clamped up against the BB shell. At this point the ISCG05 DRS backplate can be bolted up to the ISCG adapter plate and rotated enough to clear the chainstay.

What is pictured is the older ISCG bolt pattern. ISCG bolt holes are no longer machined into the older style backplate (pictured below).
